**Pearson Edexcel International Advanced Level**

**Monday 03 June 2024**

Morning (Time: 1 hour 45 minutes)

Paper  
reference

**WCH15/01**

**Chemistry**

**International Advanced Level**

**UNIT 5: Transition Metals and Organic Nitrogen  
Chemistry**

**You must have:**

Scientific calculator, Data Booklet, ruler

Total Marks

## Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*

## Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk** (\*), marks will be awarded for your ability to structure your answer logically, showing how the points you make are related or follow on from each other where appropriate.
- A Periodic Table is printed on the back cover of this paper.

## Advice

- Read each question carefully before you start to answer it.
- Show all your working in calculations and include units where appropriate.
- Try to answer every question.
- Check your answers if you have time at the end.

## SECTION A

Answer ALL questions. Write your answers in the spaces provided.

You should aim to spend no more than 20 minutes on this section.

Some questions must be answered with a cross in a box . If you change your mind about an answer, put a line through the box  and then mark your new answer with a cross .

1 What colour is vanadium(III) in aqueous solution?

- A blue
- B green
- C purple
- D yellow

(Total for Question 1 = 1 mark)

2 An oxide of vanadium is the catalyst in one step of the contact process for the manufacture of sulfuric acid.

Which reaction involves the vanadium oxide catalyst and how does the oxidation number of vanadium change during the process?

	Reaction	Oxidation number changes for vanadium
<input type="checkbox"/> A	$S + O_2 \rightarrow SO_2$	+5 $\rightarrow$ +4 $\rightarrow$ +5
<input type="checkbox"/> B	$SO_2 \rightarrow SO_3$	+4 $\rightarrow$ +5 $\rightarrow$ +4
<input type="checkbox"/> C	$SO_2 \rightarrow SO_3$	+5 $\rightarrow$ +4 $\rightarrow$ +5
<input type="checkbox"/> D	$SO_3 + H_2O \rightarrow H_2SO_4$	+4 $\rightarrow$ +5 $\rightarrow$ +4

(Total for Question 2 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

3 An equation for the reaction of  $\text{FeSO}_4$  with  $\text{KMnO}_4$  is shown.

(a) Which shows the changes in the oxidation states for iron and manganese?

(1)

	Iron	Manganese
<input type="checkbox"/> A	II $\rightarrow$ III	VII $\rightarrow$ II
<input type="checkbox"/> B	II $\rightarrow$ III	VII $\rightarrow$ IV
<input type="checkbox"/> C	III $\rightarrow$ II	II $\rightarrow$ VII
<input type="checkbox"/> D	III $\rightarrow$ II	III $\rightarrow$ IV

(b) A  $25.00 \text{ cm}^3$  sample of  $\text{FeSO}_4$  dissolved in acid required  $22.50 \text{ cm}^3$  of  $0.100 \text{ mol dm}^{-3}$   $\text{KMnO}_4$  for complete reaction.

What is the concentration of the  $\text{FeSO}_4$  solution?

(1)

- A  $0.011 \text{ mol dm}^{-3}$
- B  $0.100 \text{ mol dm}^{-3}$
- C  $0.450 \text{ mol dm}^{-3}$
- D  $0.900 \text{ mol dm}^{-3}$

(Total for Question 3 = 2 marks)

4 The emf,  $E_{\text{cell}}^{\ominus}$ , of the cell made up of the copper and magnesium half-cells is measured under standard conditions.

The voltmeter used has a measurement uncertainty of 0.50%.

What is the **highest** emf that could be measured in this experiment?

Use your Data Booklet.

- A 2.70V
- B 2.72V
- C 2.74V
- D 2.85V

(Total for Question 4 = 1 mark)

- 5 Which is the diagram for the cell made up of the nickel and zinc half-cells that gives a positive value for  $E_{\text{cell}}^{\ominus}$ ?

Use your Data Booklet.

- A  $\text{Zn(s)} \mid \text{Zn}^{2+}(\text{aq}) \parallel \text{Ni}^{2+}(\text{aq}) \mid \text{Ni(s)}$
- B  $\text{Zn}^{2+}(\text{aq}) \mid \text{Zn(s)} \parallel \text{Ni(s)} \mid \text{Ni}^{2+}(\text{aq})$
- C  $\text{Ni(s)} \mid \text{Ni}^{2+}(\text{aq}) \parallel \text{Zn}^{2+}(\text{aq}) \mid \text{Zn(s)}$
- D  $\text{Ni}^{2+}(\text{aq}) \mid \text{Ni(s)} \parallel \text{Zn(s)} \mid \text{Zn}^{2+}(\text{aq})$

(Total for Question 5 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

6 Which graph shows the relationship between  $E_{\text{cell}}$  plotted on the x-axis and  $\Delta S_{\text{total}}$  on the y-axis for any electrochemical system?

A

B

C

D

(Total for Question 6 = 1 mark)

7 Which type of data is **not** used as evidence for the structure or stability of the benzene ring?

- A infrared spectroscopy
- B mass spectrometry
- C thermochemical
- D X-ray diffraction

(Total for Question 7 = 1 mark)

8 The formation of nitrobenzene requires benzene and concentrated nitric and sulfuric acids.

Which is an equation for the reaction to form the electrophile?

- A  $\text{HNO}_3 + \text{H}_2\text{SO}_4 \rightarrow \text{NO}_2^+ + \text{SO}_4^{2-} + \text{H}_3\text{O}^+$
- B  $\text{HNO}_3 + 2\text{H}_2\text{SO}_4 \rightarrow \text{NO}_2^+ + 2\text{HSO}_4^- + \text{H}_3\text{O}^+$
- C  $\text{HNO}_2 + 2\text{H}_2\text{SO}_4 + \text{H}_2\text{O} \rightarrow \text{NO}_3^+ + 2\text{HSO}_4^- + 5\text{H}^+$
- D  $\text{HNO}_3 + 3\text{H}_2\text{SO}_4 + \text{OH}^- \rightarrow \text{NO}_2 + 3\text{HSO}_4^- + \text{H}_3\text{O}^+ + \text{H}_2\text{O}$

(Total for Question 8 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

9 Phenol reacts with bromine to form 2,4,6-tribromophenol.

[ $M_r$  values:  $\text{C}_6\text{H}_5\text{OH} = 94.0$   $\text{Br}_2 = 159.8$   $\text{C}_6\text{H}_2\text{Br}_3\text{OH} = 330.7$   $\text{HBr} = 80.9$ ]

(a) What is the percentage atom economy (by mass) for the formation of 2,4,6-tribromophenol?

(1)

- A 42.3%
- B 57.7%
- C 69.0%
- D 100%

(b) When 5.00 g of phenol was reacted and purified, the percentage yield of 2,4,6-tribromophenol was 76.8%.

What mass of purified 2,4,6-tribromophenol was formed?

(1)

- A 3.84 g
- B 13.5 g
- C 17.6 g
- D 22.9 g

(Total for Question 9 = 2 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

10 Aspartic acid is a naturally-occurring amino acid.

(a) Which form of aspartic acid is formed at pH 12?

(1)

(b) Glutamine is shown.

(i) Which is a correct structure when aspartic acid forms a dipeptide with glutamine?

(1)

(ii) What is the maximum number of chiral centres in the dipeptides in (b)(i)?

(1)

- A** 0
- B** 1
- C** 2
- D** 3

(Total for Question 10 = 3 marks)

11 A student prepared a sample of aspirin. The equation for the reaction is shown.

The aspirin was recrystallised using an ethanol–water mixture as the solvent.

The student determined its melting temperature using the apparatus shown.

The student's sample melted over a range of 8 degrees starting at 125 °C.

The published melting temperature of pure aspirin is 135 °C.

(a) Which is a suitable liquid to go in the beaker?

(1)

- A deionised water
- B ethanol
- C hexane
- D mineral oil

(b) Which is likely to be the main impurity in the sample of aspirin?

(1)

- A ethanoic acid
- B ethanoic anhydride
- C ethanol
- D 2-hydroxybenzoic acid

(Total for Question 11 = 2 marks)

12 Grignard reagents are very useful for increasing the length of the carbon chain of organic compounds.

(a) Which metal is involved in the formation of a Grignard reagent?

(1)

- A chromium
- B copper
- C magnesium
- D manganese

(b) What best describes the role of a Grignard reagent in increasing the length of a carbon chain?

(1)

- A reducing agent
- B oxidising agent
- C nucleophile
- D electrophile

(Total for Question 12 = 2 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

13 Propanoyl chloride and *N*-methylpropylamine react to form an amide and hydrogen chloride.

The structures of the reactants are shown.

(a) What is the structure of the amide formed?

(1)

DO NOT WRITE IN THIS AREA

- 15 2,6-dichlorophenol is used for communication between ticks, small parasites that can infect animals including humans.

2,6-dichlorophenol

The compound can be synthesised in the laboratory from phenol.

4-phenolsulfonic acid is formed in Reaction **A**. This is then chlorinated. Hydrolysis of intermediate compound **B** removes the sulfonic acid group.

The reaction scheme is shown.

- (a) (i) The sulfonation of phenol is similar to the sulfonation of benzene. Suggest the reagent(s) required for Reaction **A**.

(1)

- (ii) Deduce the structure of intermediate compound **B**.

(1)

(iii) Explain why the reaction of chlorine with phenol occurs under milder conditions than the reaction of chlorine with benzene.

(3)

.....

.....

.....

.....

.....

(b) An alternative synthesis of 2,6-dichlorophenol starts with compound **C**.

compound **C**

Compound **C** is chlorinated and hydrolysed and then the  $\text{CO}_2$  group is removed (decarboxylation) to form 2,6-dichlorophenol.

Other than phenol, name the functional group present in compound **C**.

(1)

.....

(c) Identify **three** factors that organic chemists would take into account when considering alternative methods for an organic synthesis.

**16** Metal ions occur naturally in river water but near industrial plants the concentrations can reach toxic levels. Wastewater from a stainless steel electropolishing plant contains dangerous concentrations of transition metal ions as aqueous complexes.

Chemical precipitation can be used to remove these ions from the water.

- (a) Complete the equation for the reaction of a laboratory reagent with aqueous  $\text{Fe}^{3+}$  ions to produce a precipitate.

Include state symbols in your answer.

(2)

- (b) Sodium dimethyldithiocarbamate,  $(\text{CH}_3)_2\text{NCS}_2^- \text{Na}^+$ , can also be used to precipitate metal ions from wastewater in acidic solutions.

A representation of the molecule bonding with a nickel ion is shown.

- (i) Complete the table for the complex.

(3)

Charge on nickel ion	
Type of ligand	
Co-ordination number of the nickel ion	
Shape of metal complex around the nickel ion	

- (ii) Explain, using a balanced equation, why the formation of the dimethyldithiocarbamate complex from an aqueous solution of nickel ions is thermodynamically feasible.

State symbols are not required.

(2)

- (iii) When a 5 dm<sup>3</sup> sample of wastewater was treated with excess **acidified** sodium dimethyldithiocarbamate, 245.0 mg of the dry precipitate  $\text{H}^+[\text{Ni}((\text{CH}_3)_2\text{NCS}_2)_3]^-$  was formed.

Calculate the concentration, in mol dm<sup>-3</sup>, of nickel ions in the sample.

[Molar mass of dimethyldithiocarbamate ion = 120.2 g mol<sup>-1</sup>]

## SECTION C

Answer ALL the questions. Write your answers in the spaces provided.

- 19 In recent years, there have been health and safety concerns over “liquitabs”. These are capsules which contain concentrated liquid detergents.

The soluble packaging breaks down upon contact with water during a laundry cycle to release the detergent.

Some liquitabs are small and colourful, which makes them attractive to young children who may be tempted to put them in their mouth or play with them. When moist, liquitabs can burst in a child’s hand, potentially irritating the eyes and skin. They can also dissolve quickly and may burst in a child’s mouth in a very short period of time. This allows the contents to escape quickly and if swallowed can cause severe breathing difficulties.

- (a) Identify the hazard symbol(s) that should be displayed on a box of liquitabs, using ticks (✓).

(1)

- (b) The capsule containing the detergent is often made from poly(ethenol) and its derivatives.

- (i) Draw the structure of poly(ethenol), showing three repeat units.

(2)
